

### BROOK TROUT

Algonquin Provincial Park lakes are stocked with a native strain of Brook Trout from Dickson Lake in Algonquin.

In 2017 the park was able to take advantage of a surplus of fish, and stock all of our regularly stocked Brook Trout lakes in the park. Some lakes were stocked with older, and therefore significantly larger stock than in previous years.

Unless otherwise noted, Algonquin lakes are stocked with yearling fish (16-17 months old)

- Stocked with sub-adult immature fish (22 months old)
- Stocked with mature adult fish

\* 775 fish stocked were at an early life stage

\* All lakes on the stocking list are in UTM Zone 17, except for Length, Marie and Rowan lakes which are in UTM Zone 18.

**FISH MEASUREMENTS**  
 Record the total length of the fish you keep, from the tip of the mouth to the tip of the tail with fins compressed using any units you are comfortable with. Please specify units.

Please try to record the length of all fish kept, not just the big ones, using the method shown here → 

Date	Waterbody Name	Species	Total Length (specify units)
11 May	Example Lake	Brook Trout	280mm, 310mm, 450mm

Return your survey along with your camping permit to a permit office, the Openings call box or mail it in the postage paid envelope no later than December 31. One in four individuals that submit a fully completed survey will be mailed an EOB Spoons (\$12 value).

Name: \_\_\_\_\_  
 Email: \_\_\_\_\_  
 Address: \_\_\_\_\_

Your questions and comments are welcome. Please contact Fisheries Biologist, Glenn Furend at glenn.furend@ontario.ca or 613 637 2789 ext. 270.

**Thank you for participating and good luck!**

Please record fishing information on the other side of this form.

### How You Can Help with Fisheries Monitoring in 2020

When registering for a camping permit you will be asked if you intend to fish during your trip; if yes, you will then be asked what species you will be fishing for. Anyone planning to fish for trout or bass will be asked to take along a voluntary survey to record the angling effort and catch for your party. The survey is a pocket-sized sheet printed on waterproof paper that takes just minutes per day to complete. At the end of your trip, the survey may be mailed to the Algonquin Fisheries Assessment Unit in the postage-paid envelope provided or returned to any Park office. Algonquin Park contains over 25 percent of native Brook Trout lakes and about 10 percent of native Lake Trout lakes remaining in Ontario. It is imperative that we monitor the condition of these irreplaceable fisheries. We thank you for helping us with this important monitoring.

If you think you've found an invasive species or want more information on invasive species, contact the **Invading Species Hotline at 1-800-563-7711** or check out [www.invadingspecies.com](http://www.invadingspecies.com)

# ONTARIO MINISTRY OF NATURAL RESOURCES

## Fish Stocking List for Algonquin Provincial Park — 2015 to 2020

### SPLAKE

Splake are a hybrid produced by crossing female Lake Trout (Killalake strain) and male Brook Trout (Hill's Lake strain). They are specifically used to provide Put-Grow-Take fisheries in lakes that will not support populations of either parent fish.

For more information about fishing in Algonquin Park, please visit:  
[www.algonquinpark.on.ca](http://www.algonquinpark.on.ca)

**REMEMBER:**  
**Live baitfish are prohibited in Algonquin Park.**

See Ontario Recreational Fishing Regulations Summary for more details.
